Application No.

Continuation of 2. NOTE: The amendment to claim 16, lines 6, 7 and claim 18, lines 6-7 and new claim 22 raise new issues that would require further consideration and/or search.

Continuation of 5. does NOT place the application in condition for allowance because: Applicant's argument concerning Applezweig has been considered. However, Applezweig clearly states that the envelopes 11 are formed of a transparent frangible material and nothing in the disclosure prevents one from applying pressure on the cover of the envelope to puncture therethrough. In addition, Appelzweig uses the same type of material as applicant. In addition, on column 9, lines 34-36, the reference even utilize a film of foil packaging which is commonly known in the packaging art as easily frangible by application of pressure on the cover thereof. With respect to Roulin et al, the push through feature is for a user to push through the cover or lid that is made out of aluminum foil with relatively little force for it to rupture. It is contrary to applicant's interpretation that the amount of finger pressure applied has to push through both sides of the envelope..
